### **Autologic Release PORSCHE Cayenne Software**

This November Autologic Diagnostics Ltd announced that *Autologic* software for the latest Porsche Cayenne vehicles has been released worldwide to all Autologic customers with a valid maintenance contract.

The new *Autologic* Porsche Cayenne software covers coding, module identification, fault code reading, live data, activations and select special functions such as service reset for example for all petrol, diesel and hybrid Cayenne models. Autologic Diagnostics have said that programming capability will be added shortly once the current development has concluded but confirmed that Panamera programming software is now live.

Furthermore, as the *Autologic* tool has an automatic logging process, any customers who may discover any previously unknown variants, can send logs direct to Autologic's software engineering team for rapid additional development – usually within 24 hours.

The Cayenne is also now included in Autologic's 4x4 vehicle deal as an optional add-on with the purchase of the main Land Rover 4x4 package.

Ian Jones Autologic's Technical Director said, "*The release of this Cayenne software is great news for independent Porsche specialists and completes the Porsche coverage allowing engineers to develop software for the new 911 (991).*"

-----ENDS-----

**ADDITIONAL INFORMATION:**

**Autologic Diagnostics Ltd** is the manufacturer and distributor of a high-end aftermarket diagnostic tool – *Autologic*. Founded in 1999, the company has risen from a small enterprise to a multi-award-winning company today with operations spanning the globe.

The *Autologic* diagnostic tool is designed to replicate the functionality of those used by manufacturers' dealers, enabling independent garages to provide comprehensive servicing in their own workshops – including coding and flash programming. Furthermore, Autologic supports the independents with training and factory-trained Master Technicians and specialist software engineers. Software is currently available for BMW, Land Rover, Jaguar, Mercedes-Benz, Porsche, Volvo, VAG, Peugeot/Citroen/Renault and Rolls-Royce vehicles.
